DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submissions filed on 6-27-2003 and 8-7-2003 have been entered.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 25-32 are rejected under 35 U.S.C. 102(b) as being anticipated by Engel et al (3,988,955), hereafter Engel. Engel discloses a method of coating a surface of a steel cutting instrument by means of plasma with foreign ions in columns 2-4, lines 15-61. Engel discloses that a 1095 AISI steel blade has with a hardness of 70 on the Rockwell 30 N scale has foreign ions to a depth of 0.001 inches, which equates to 30 micrometers, in column 3, lines 32-41. Engel also discloses that the penetration depth of the ion implantation depends on the hardness of the substrate in column 4, lines 39-40. It is inherent that the depth of the ions is between 100 micrometers and 200 micrometers due to the disclosure mentioned above in Engel. Note

hardness in column 6, lines 66-68. Note molybdenum and tungsten in column 4, lines 67 and 68. In column 5, lines 61-68, the coating 16 comprises tungsten carbide and does not contain any titanium, therefore, the portion of tungsten ions is greater than the portion of titanium ions, which is zero.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Ballard is cited for a similar method.
